

Prepare your material enquiry.

A short checklist for a specification-led quotation. Include the details you know and identify the points that need discussion.

01 / Material & composition

Material or alloy name, chemical symbol and required grade. Include the applicable standard, main element content and maximum impurity limits.

02 / Product form & quantity

Specify the required form: ingot, billet, rod, plate, cathode, lump, flake or powder. Include dimensions or size distribution, tolerances, net quantity and permitted variation.

03 / Packing & delivery

Required pack type, net weight per pack, marking and handling requirements. State the destination country or port, requested delivery date and preferred shipping terms.

04 / Documents & acceptance

Include your specification or drawing. State required lot analysis, current lot photographs, sampling requirements and any independent inspection or acceptance criteria.

05 / Business contact

Your name, company, work email and telephone. Combine multiple materials into one enquiry, with a separate grade, form and quantity for each line.
